GLOBAL CORPORATE ACCESS (GCA)
PRODUCTIVITY GOES WI-FI

Mobile work is part of everyday business life, and the availability of high-speed and high-quality Internet access is critical for productivity today. Global Corporate Access (GCA) is a corporate solution that offers optimal service quality for Wi-Fi use and facilitates Internet access in more than 120 countries. Simple, smart and secure with transparent costs.

THE WORLD'S LARGEST WI-FI NETWORK

With more than 57 million hotspots, GCA is the world's largest Wi-Fi network, allowing business professionals to access the Internet at all relevant business locations, such as hotels, airports, restaurants and many public spaces. For those on the move, GCA also offers Internet access on many trains and planes (inflight connectivity).

AN EXCELLENT CONNECTION WITH SMART CONNECT

GCA uses advanced analytics to assess hotspots based on criteria such as signal strength, speed, bandwidth and connection success. The resulting information is sent to the Smart Connect platform together with location information, where it is analysed so that GCA users can always connect to the best available hotspot.

HIGHLIGHTS

- The world's largest network (over 57 million hotspots in more than 120 countries)
- Inflight services in the US, Europe and Asia with well-known airlines
- Evaluation and prioritisation of hotspots based on their service quality
- Simple activation of the GCA client without entering user data
- Automatic connection (Auto Connect)
- Smart Connect to establish a connection with the best available hotspot
- Security for mobile devices with Last Mile VPN
- Compatibility with common corporate VPN solutions
- Unlimited flat rate – no contractual restrictions in terms of time, data volume or speed

LIFE IS FOR SHARING.

SIMPLE USE WITH AUTO CONNECT

Once it has been installed, the GCA client only needs to be activated once. There is no need to enter a username or password. The client then automatically connects to the best available hotspot in the area. Users no longer have to log on manually at hotspots using an individual access code or voucher or by entering personal data such as an email address.

OPTIMAL SECURITY WITH LAST MILE VPN

GCA is particularly secure because employees who are mobile do not have to disclose sensitive data when connecting to public hotspots. A Last Mile VPN to the nearest GCA gateway also protects data transmissions when mobile devices access the Internet through a hotspot. Furthermore, GCA is compatible with the most common VPN solutions, supporting the enforcement of specific company security policies.

COMPLETE COST CONTROL

With the flat-rate service GCA Unlimited, even data-intensive applications can be used without limit. This eliminates high roaming costs for 3G and 4G data consumption and one-off charges for individual premium and in-flight services. Companies receive a collective statement for all users.

ADVANTAGES

- Greater productivity: mobile work with GCA at any time, anywhere
- Optimal hotspot service quality thanks to advanced analytics
- Simple use (no vouchers, registration or advertising)
- Greater security when using free Wi-Fi access points
- Transparent and reduced costs

SUPPORTED PLATFORMS

- Windows 10,8,7
- Mac OS
- iOS
- Android
- Windows 10 Mobile
